

## **DRDO – FICCI Accelerated Technology Assessment and Commercialization Programme**

### **Minimally processed vegetables in precut and packaged form**

Modern consumers are in need of purchase of precut vegetables in packaged form and such products are highly susceptible to microbial spoilage, tissue browning and textural losses. Cold chain in the country is inadequate to support continuous refrigeration of precut produce. Therefore, precut produce in a partially stabilized form with minimal process could be suitable for tropical climate with inadequate infrastructure.
